

THE FUTURE OF FILLERS

THE CURRENTLY FDA-APPROVED FILLERS AND INJECTABLES AREN'T GOING ANYWHERE, BUT YOU MAY BE ABLE TO EXPECT THESE PRODUCTS TO BE AVAILABLE AT YOUR DOCTOR'S OFFICE SOME TIME IN THE NEAR FUTURE.

freeze wrinkles fast

THE INJECTABLE: **XEOMIN**

What it is A neurotoxin (it's currently FDA-approved to treat cervical dystonia, excessive blinking and abnormal head position and neck pain)

When it will be available Unknown although an application for its cosmetic use has been submitted to the FDA

How it's different "This is a pure protein, so there is the potential for faster onset of action and, theoretically, the effects will appear quicker than they do with Botox or Dysport," says Dr. Beer. Adds Dr. Waldorf, "because it's void of other ingredients found in Botox or Dysport, it's a good option for those who may have allergies to other toxins on the market or don't want to be exposed to some of the ingredients typical of Botox or Dysport."

bruise-free injections

THE FILLER: **BELOTERO BALANCE DERMAL FILLER**

What it is A hyaluronic acid dermal filler

When it will be available Unknown, although the filler is currently being reviewed by the FDA

How it's different "Unlike other hyaluronic acid fillers on the market, which are clear and can cause a bluish tint to the skin (as light is reflected) if injected too superficially, Belotero can be injected more superficially, like in the lips and in lip lines, because it disperses into the skin more evenly," says Dr. Beer. "It may also cause less bruising because it can be injected more easily, and it's absorbed more easily at the injection site."

create volume with fewer syringes

THE FILLER: **JUVÉDERM VOLUMA**

What it is A hyaluronic acid filler

When it will be available Unknown; the filler is currently in clinical trials

How it's different "Juvéderm Voluma is much more viscous and cohesive than Juvéderm Ultra and Juvéderm Ultra Plus so it will be good for deep volumizing—basically you'll be able to get volume and lift without having to use as many syringes of other hyaluronic acid products," says Dr. Waldorf.

for deeper injections

THE FILLER: **PREVELLE LIFT**

What it is A hyaluronic acid injectable

When it will be available Unknown

How it's different "This version is viscous, unlike the original, so it can be injected deeper and directly on the bone," explains Dr. Waldorf. "Prevelle Lift is an alternative for patients who need a good 'lifting' injectable but want a hyaluronic acid filler because it can be 'erased' or removed completely."
